

PROCEDURES TO PERFORM ZERO2NATURE PROJECT ACTIVITIES  
VALIDATION/VERIFICATION/CERTIFICATION DURING COVID19 PANDEMIC

Version 1.0 -Sectoral Scope - All

“Developed from the UNFCCC CDM conception”.

April 2020

**PROCEDURES TO PERFORM ZERO2NATURE PROJECT ACTIVITIES  
VALIDATION/VERIFICATION/CERTIFICATION DURING COVID19 PANDEMIC**

Version 1.0 - Sectoral Scope - All

I. During the COVID19 Pandemic, Designated Environmental Certifiers-DECs are authorized to proceed with the validation, certification and verification rites of ZerO2Nature project activities, as follows:

I.1. DEC can hire a local auditor to perform the validation and verification functions *on site*, as long as his/her knowledge of the ZerO2Nature standard is proven and her/his professional qualifications aver her/his ability to perform the functions optimally;

I.2. All documents, such as non-conformities, clarifications, corrective actions, etc., must be accompanied by photos and/or videos that allow proof -at a distance- of the documented acts;

I.3. The use of personal protective equipment is a *sine qua non* condition for the ZerO2Nature Standard to accept evaluating documents based on this procedure.

Although this procedure makes the validation, verification and certification processes more flexible, the technical rigor must be even greater than that determined by Standard ZerO2Nature.

The ZerO2Nature System makes it known to the DECs and Project Proponents that -at any time- a technical representative of the ZerO2Nature standard will be able to visit the project area to compare the reports -of validation, verification or certification- sent by the DEC.
